

Test Update 874

Posted Date 03/26/2024
Effective Date 05/06/2024
Update Type [Test Discontinued](#)
CPT Code 81218

EFFECTIVE DATE: May 6, 2024

TESTS DISCONTINUED

CEBPA Mutation

Order Code: CEBPA
Fee Code: NA055 (CPT 81218)

The MLabs Molecular Diagnostics Laboratory will discontinue offering the CEBPA Mutation and KIT Mutation for AML assays effective May 6, 2024.

Each of these tests is performed using Sanger Sequencing and both of these genes, including additional exons for KIT, are included in sequencing within the Myeloid NGS Panel (order code MYENG). In addition, the Myeloid NGS Panel detects these mutations with a lower limit of detection (5% variant allele frequency compared to 20% allele frequency for the single gene tests). Myeloid NGS is recommended for acute myeloid leukemia, other myeloid neoplasms, and all applications in which these single gene tests were previously ordered.
